

## FITTING SEE-THRU MOUNTS

Suitable for scope grooves from 9.5 to 11.5mm max. Scopes with up to 40mm lenses can usually be fitted. If groove on rifle is too wide for the mount to slide on or fit over, remove the two side screws (M4 x 25) and washers, refit the screws the reverse way and insert the metal strip as shown. By *gradually* tightening the screws, the legs of the mount can be spread apart until the mount will fit over the groove. Release the tension on the screws, remove the metal strip and refit in the original position and tighten.

**Note:** Do not exceed a torque of 4.5 lb/ft (6NM) on any of the screws.
